PERFORMANCE - OVERVIEW

Year	Total GMV	Total Booking	Total Order	Order Completion Rate	Total Promo Spending	Promo % of GMV
2023	48,903,760	5,742,216	5,359,025	93.33%	8,357,675	17.09%
2024	60,628,033	7,109,050	6,680,371	93.97%	10,278,891	16.95%
Total	109,531,793	12,851,266	12,039,396	93.68%	18,636,566	17.01%

- GMV grew well 24% YoY.
- Number of Bookings, Orders and Order Completion Rate grew evenly
- Promo fluctuated at a stable level

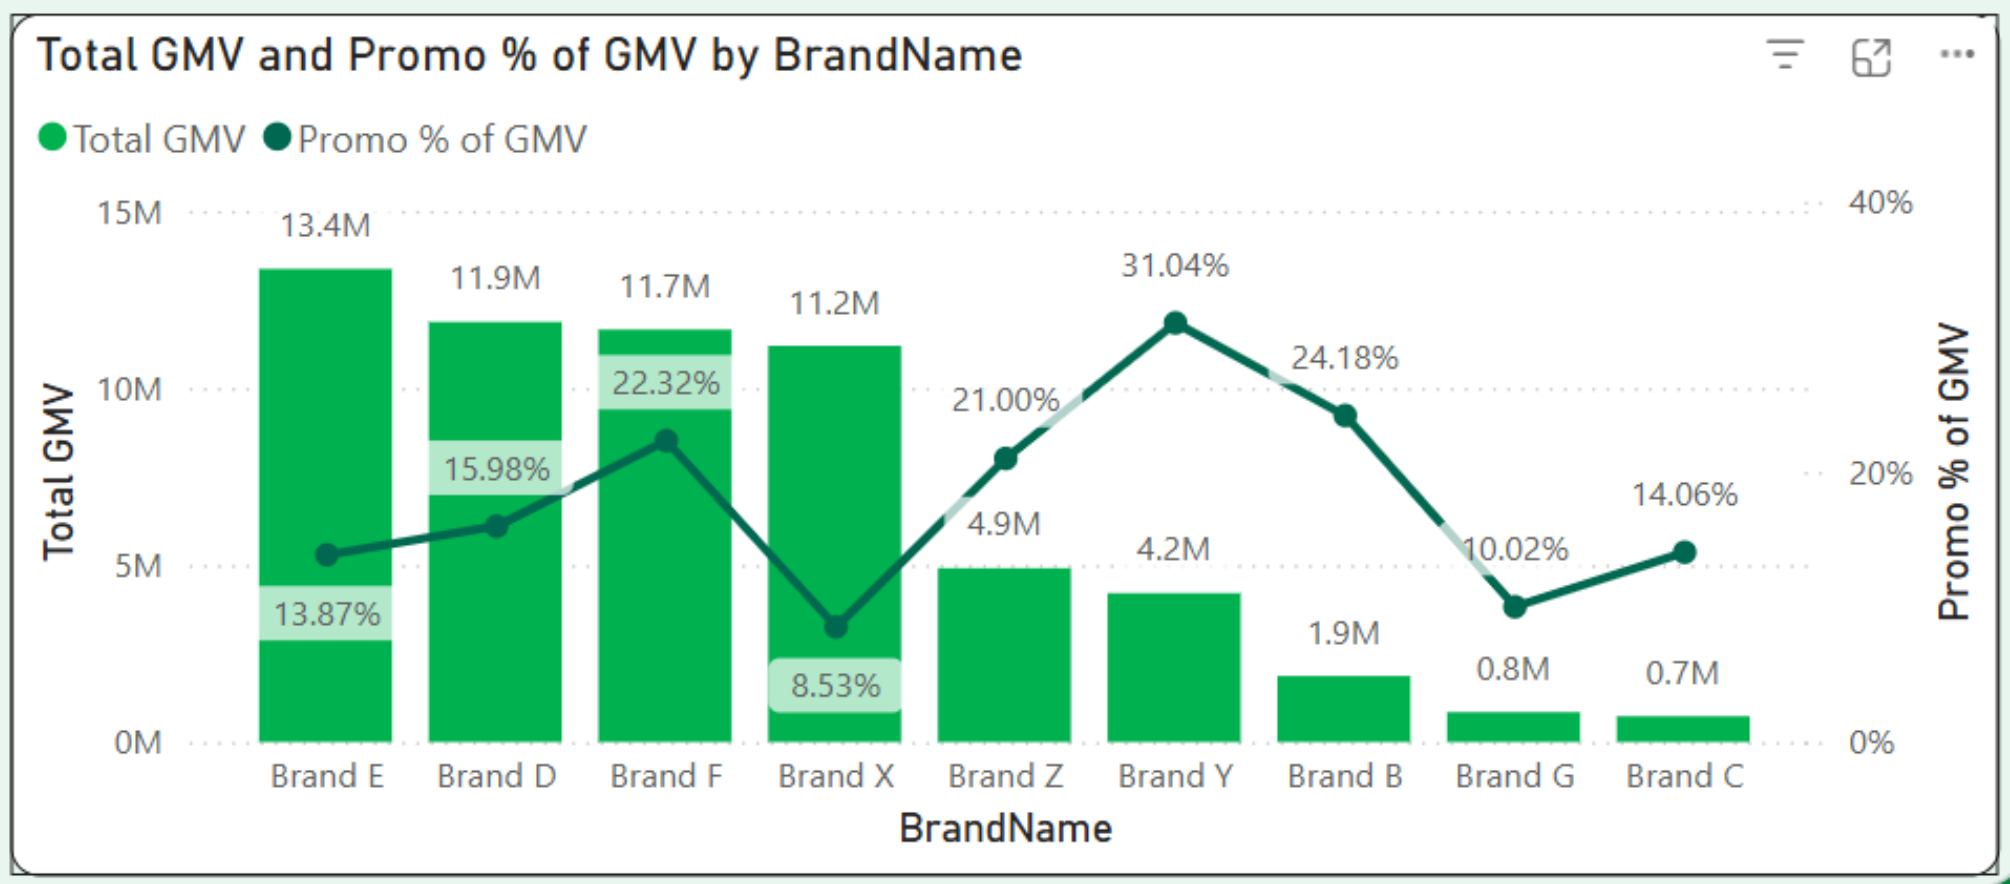

PERFORMANCE - OVERVIEW

- Brand E has high GMV but only 18.09% growth
- Brand D has high GMV and 83.75% growth → Key Drivers
- Brand Y has low GMV but 111.7% growth → Huge growth potential

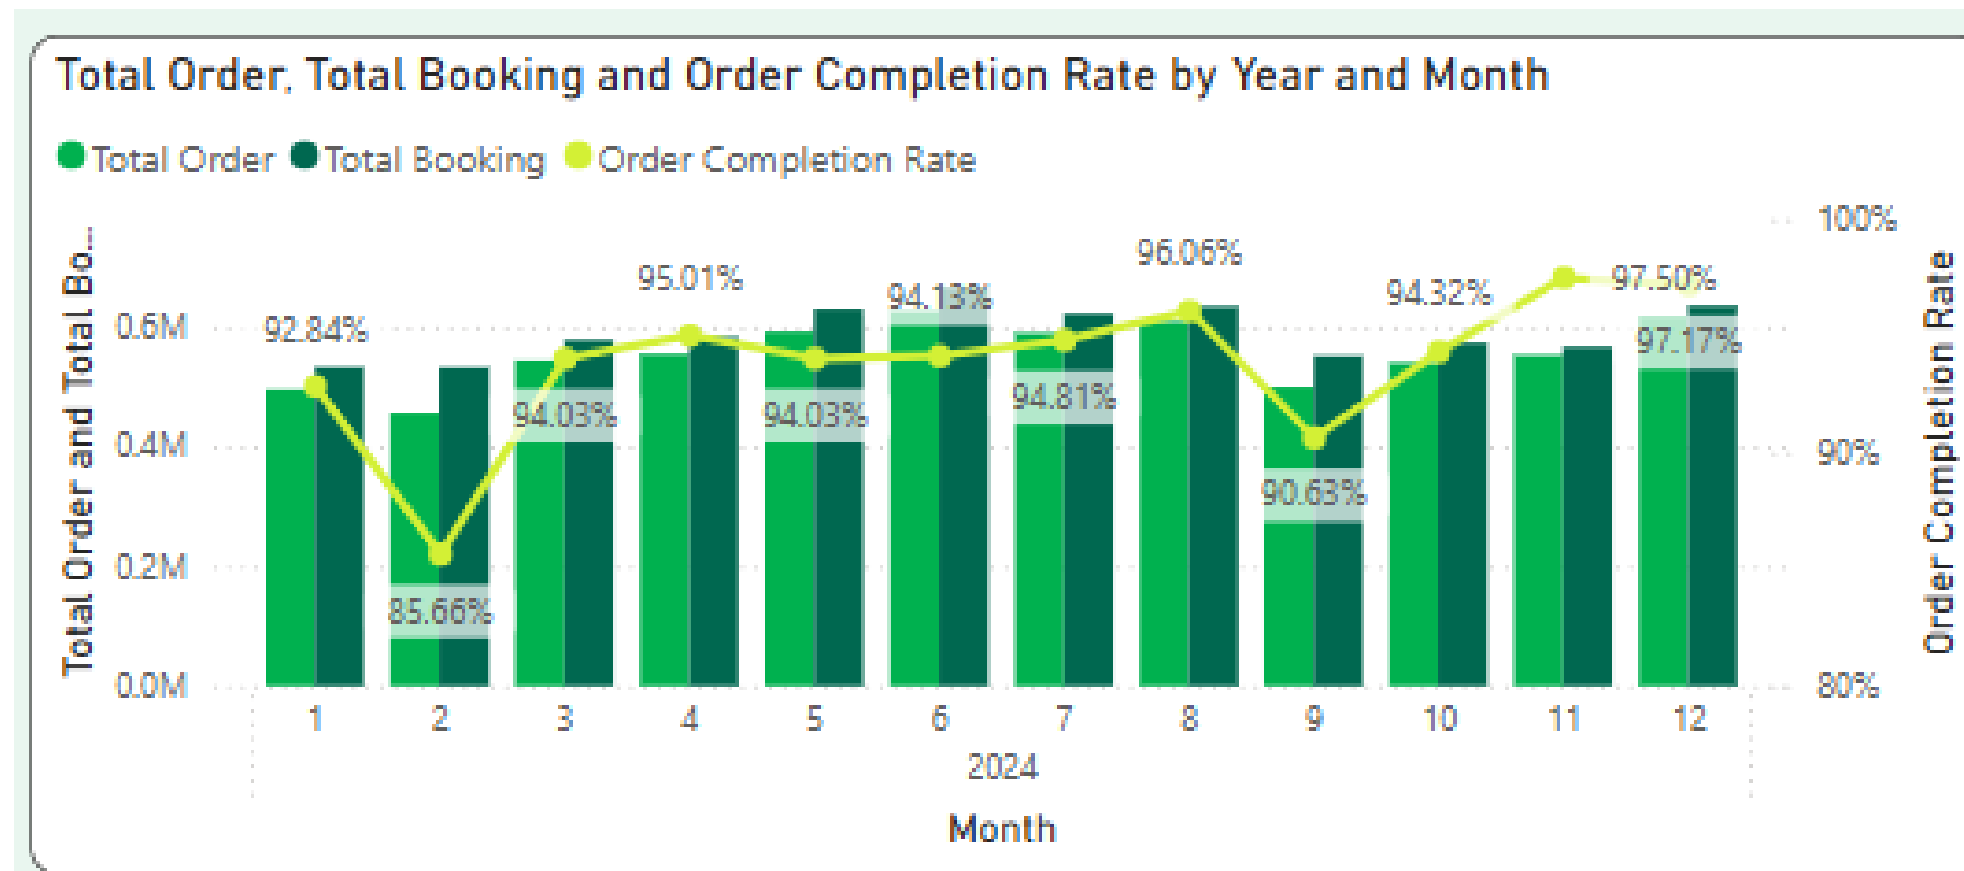

BrandName	2023	2024	% GM YoY
Brand B	1,697,176	1,865,134	9.90%
Brand C	902,722	728,461	-19.30%
Brand D	6,456,578	11,865,918	83.78%
Brand E	11,317,230	13,364,856	18.09%
Brand F	12,737,540	11,652,150	-8.52%
Brand G	871,098	844,722	-3.03%
Brand X	8,268,093	11,192,622	35.37%
Brand Y	1,985,922	4,204,121	111.70%
Brand Z	4,667,401	4,910,049	5.20%
Total	48,903,760	60,628,033	23.97%

- Brand B has a GMV increase of only 9.90% despite %Promo being up to 24.1% → Promo spending is inefficient
- Brand F has %Promo 22.32% but negative growth of -8.52% → A high level of promo funding to drive sales but inefficient

PERFORMANCE - IN-DEPTH ANALYSIS

BOOKING , ORDER AND ORDER COMPLETION RATE

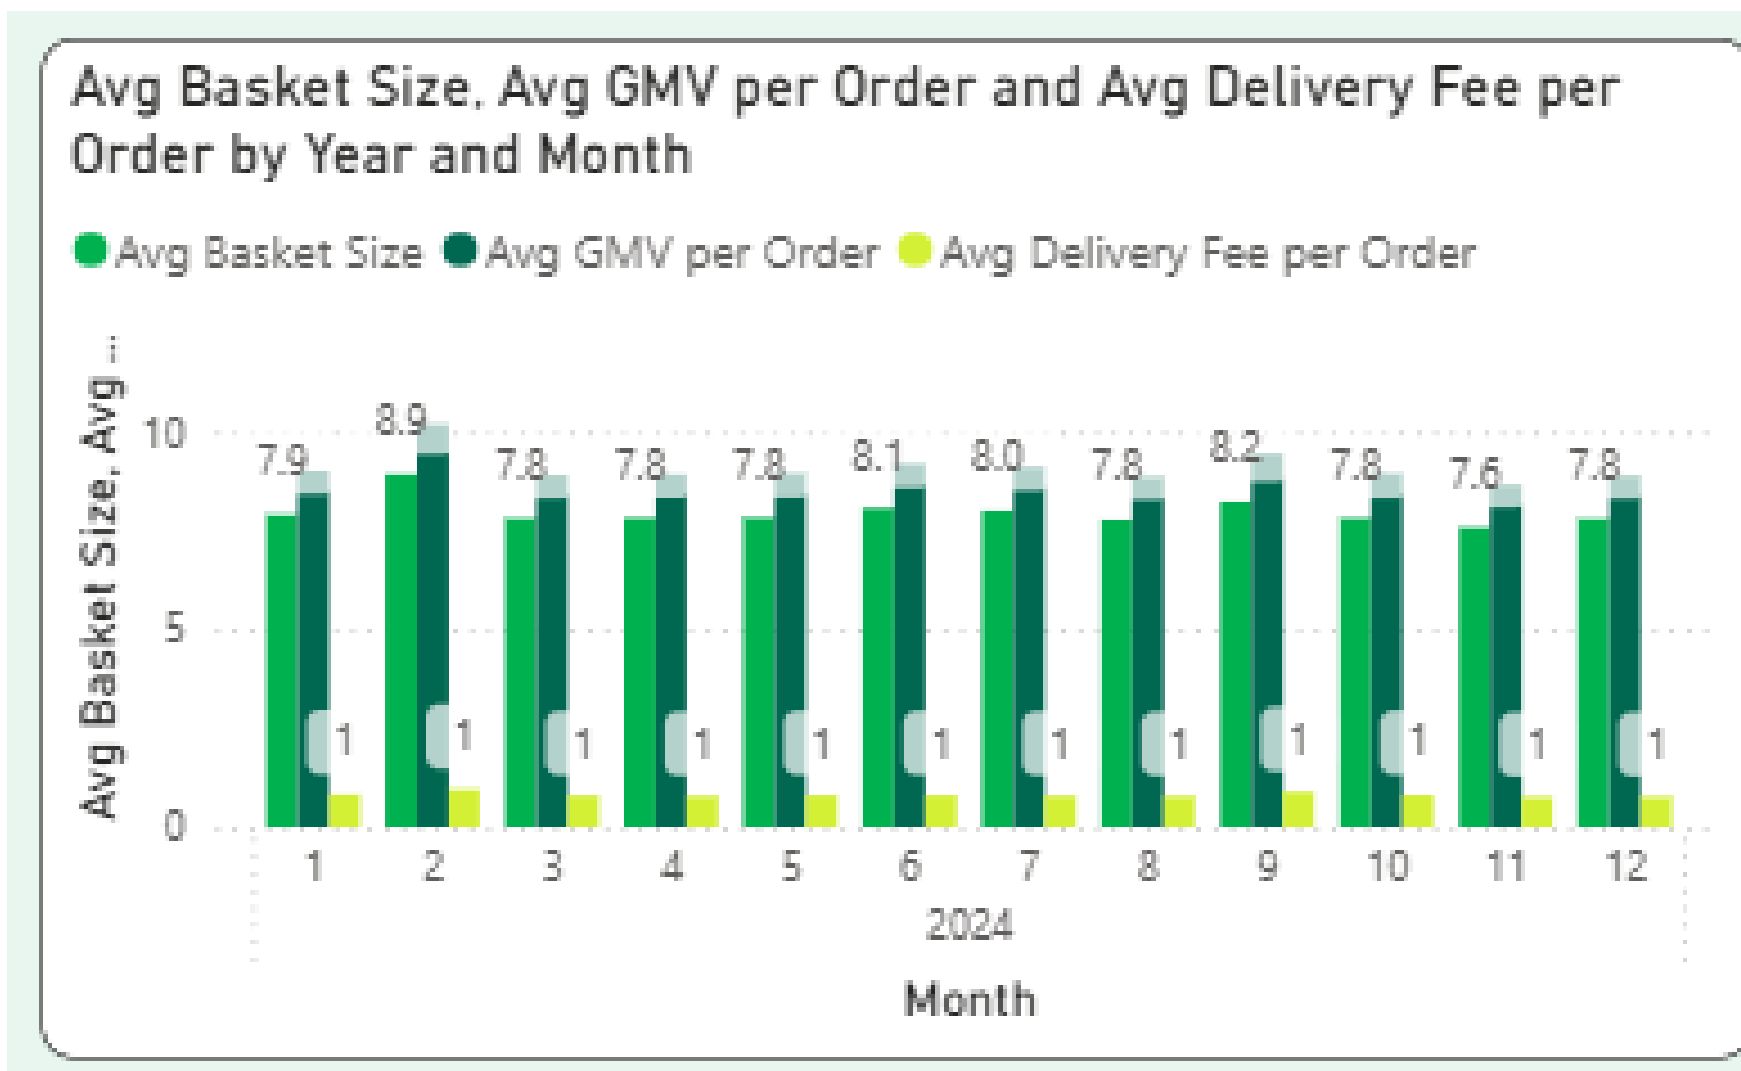

Insight

- Bookings in December increased by 12% MoM, showing stronger demand but Orders only increased by 11% → Order Complete Rate decreased slightly
- In February, Order Complete Rate decreased quite deeply. Next, in September, Order Complete Rate also decreased to 90.63%

Action: Check the reason for cancellation: lack of driver, outlet out-of-stock or delivery time too long. Do quick win survey to find pain point

PERFORMANCE - IN-DEPTH ANALYSIS

AVG BASKET SIZE, AVG GMV PER ORDER, AVG DELIVERY FEE

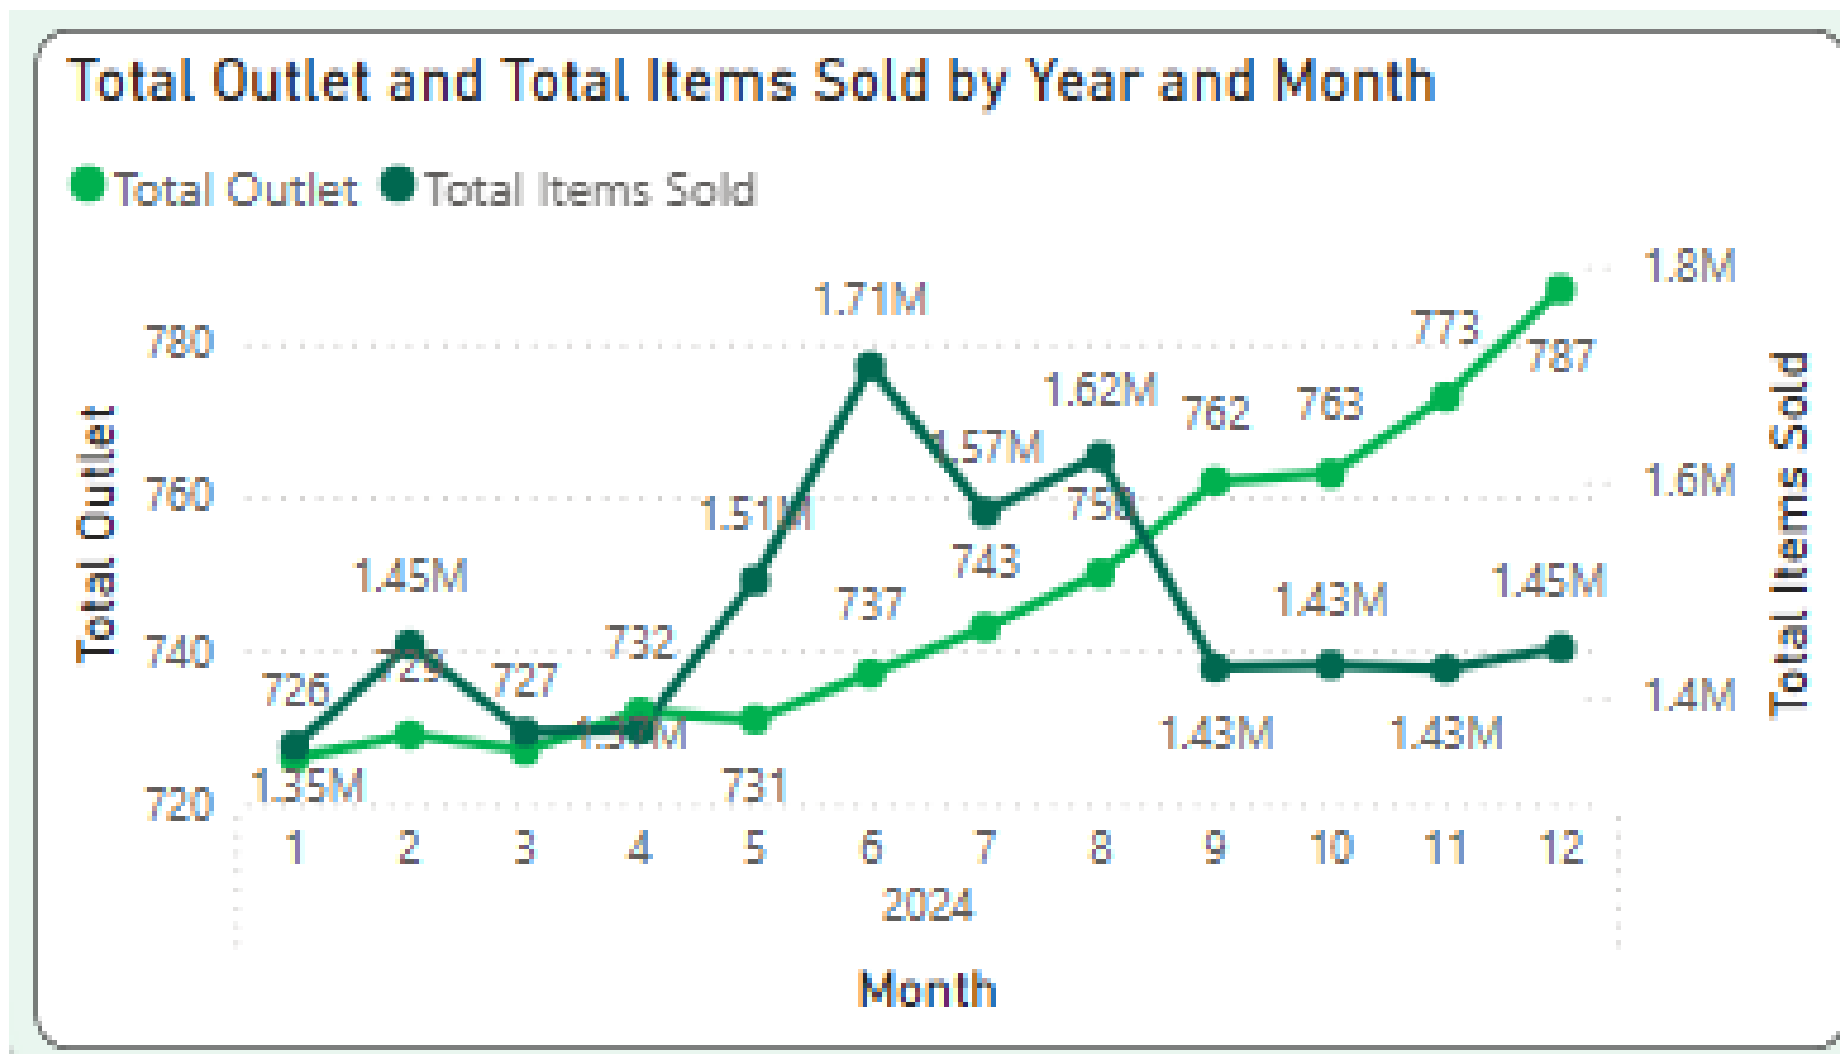

Insight

- Avg Basket Size, Avg GMV Per Order and Avg Delivery fee stable growth MoM → users do not split orders to use multiple vouchers

Action: Maintain cross-sell, push special combos to keep basket size and GMV Per Order high

PERFORMANCE - IN-DEPTH ANALYSIS

TOTAL OUTLET AND TOTAL ITEMS SOLD

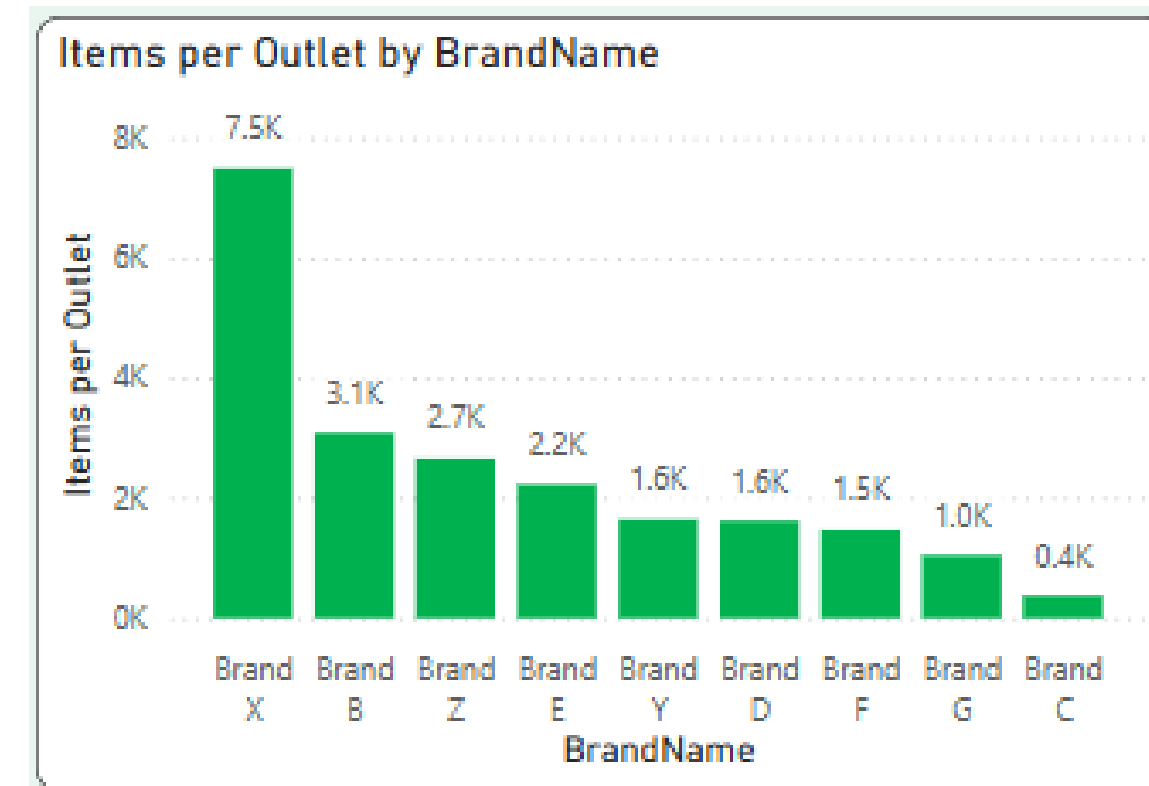

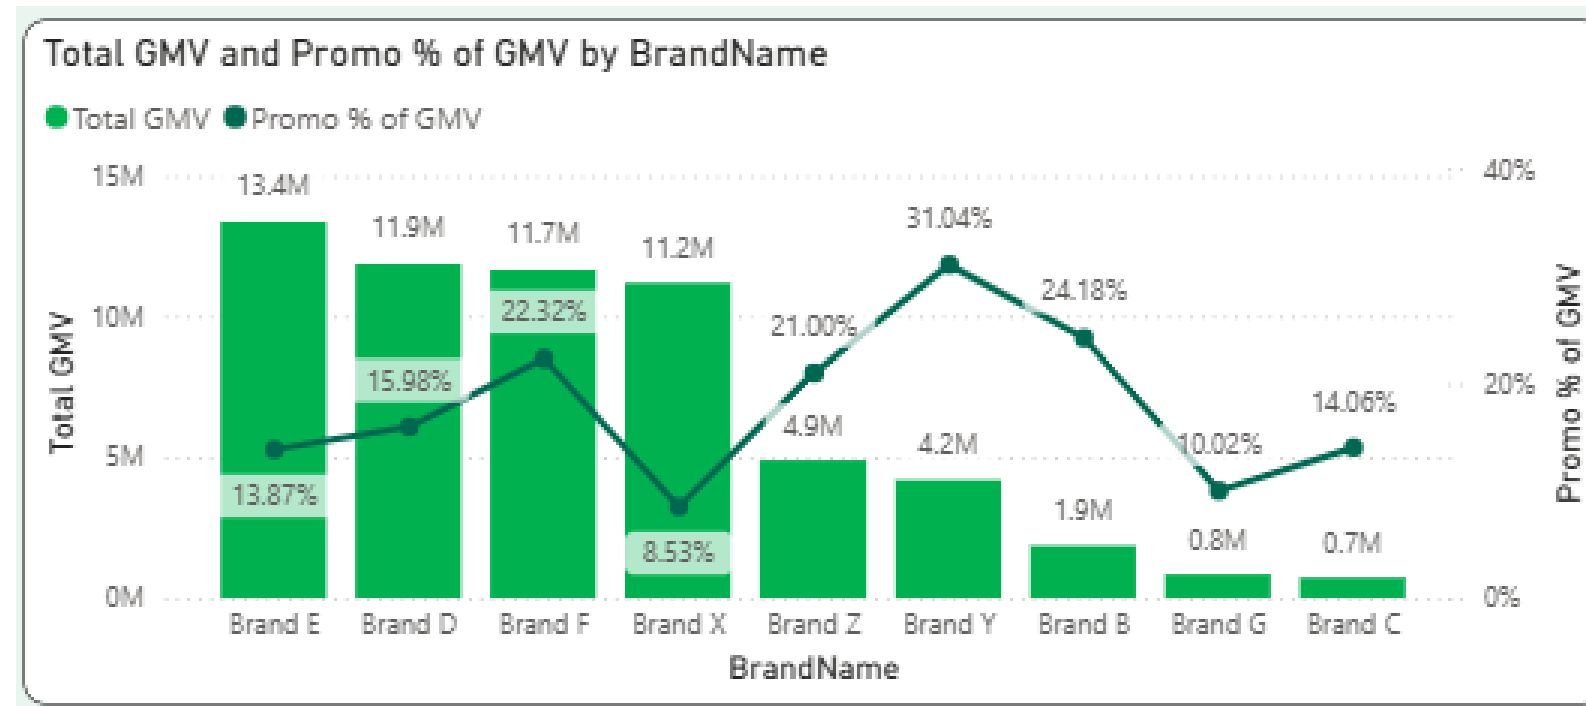

Insight

- Add more Outlets, Items Sold increased sharply from March to June → New Outlets contributed well.
- From August to September, Items Sold decreased sharply, and remained stable from September to December. Although Outlets still increased steadily → New Outlets contributed poorly or old Outlets were operating effectively

Action: Track Items/Outlets: low traffic outlets need to push boosting campaigns, or consider closing underperforming outlets

PERFORMANCE - IN-DEPTH ANALYSIS

TOTAL OUTLET AND TOTAL ITEMS SOLD

Insight

- Brand Y GMV is low, but Promo accounts for 31.04% GMV → depends on promotions to maintain volume.
- Brand X GMV is quite high, Promo % is low, Items/Outlet is highest → This brand is the most effective
- Brand C GMV is low, Items/Outlet is low, Promo % is moderate → Brand C has not spent on promotions, less competitive

Action:

- Increase co-sponsor deals with Brand Y. Focus on loyalty vouchers instead of mass promos to reduce Promo % of GMV
- Prioritize expanding Brand X outlets in weak Areas, replicate good operating models.
- Work with Brand C to increase funding for promos. Propose running awareness campaigns in weak Areas.

PROPOSAL FOR PROMOTION 2025

BrandName	Total GMV	Brand promo	Grab promo	% Pro (Grab)	% Pro (Brand)
Brand B	1,865,134	362,988	88,040	4.72%	19.46%
Brand C	728,461	27,399	74,988	10.29%	3.76%
Brand D	11,865,918	1,007,777	888,797	7.49%	8.49%
Brand E	13,364,856	943,073	910,225	6.81%	7.06%
Brand F	11,652,150	1,632,302	968,366	8.31%	14.01%
Brand G	844,722	30,981	53,624	6.35%	3.67%
Brand X	11,192,622	288,377	665,997	5.95%	2.58%
Brand Y	4,204,121	1,016,125	288,777	6.87%	24.17%
Brand Z	4,910,049	658,157	372,898	7.59%	13.40%
Total	60,628,033	5,967,179	4,311,712	7.11%	9.84%

Grab Promo Budget 2025: 4,311,712×90% = 3,880,541

PROPOSAL FOR PROMOTION 2025

Grab Promo Budget 2025: $4,311,712 \times 90\% = 3,880,541$

Allocation principle:

- Which brand has high % Pro (Grab) → High funding dependency → prioritize reduction.
- Which brand has high GMV, low % Pro (Grab) → keep or increase to continue boosting
- Which brand has good Brand Promo → strong co-sponsor to reduce Grab's promo spending

Brand	% Pro (Grab)	Note	Recommendation
Brand C	10.29%	Highest % → heavily dependent on Grab's promo funding	Significant reduction (reduce over-dependency)
Brand F	8.31%	Relatively high due to large GMV, could be optimized	Moderate reduction (encourage more Brand funding)
Brand X	5.95%	Low % → efficient, effective spend	Maintain current budget
Brand Y	6.87%	Stable, but Brand Promo already high (24.17%) → good co-sponsorship	Slight reduction (Brand co-sponsors well)
Brand B	4.72%	Very healthy, consider maintaining or slight increase to boost	Maintain or slightly increase (good ROI)
Brand G	6.35%	Small GMV, consider reduction	Significant reduction (small GMV, high burn)
Brand D	7.49%	Average level, slight reduction possible	Slight reduction
Brand E	6.81%	Stable, high GMV, maintain or slight reduction	Slight reduction
Brand Z	7.59%	Above average, should be adjusted	Slight reduction

PROPOSAL FOR PROMOTION 2025

Overall, reallocate Grab promo budget based on efficiency and funding dependency to ensure sustainable growth

Brand	Grab Promo 2024	Proposal %	Grab Promo 2025 Proposal
Brand B	88,040	5%	92,442
Brand C	74,988	-50%	37,494
Brand D	888,797	-15%	755,478
Brand E	910,225	-5%	864,714
Brand F	968,366	-15%	823,111
Brand G	53,624	-50%	26,812
Brand X	665,997	0%	665,997
Brand Y	288,777	-15%	245,460
Brand Z	372,898	-15%	316,963
Total	4,311,712	~	3,828,471

ASSIGNMENT 2

Write a SQL query to generate a report on number of items sold, number of orders of each brand on a specific day (i.e. 21-Jun-2025)

```
select b.date ,  
       b.brand,  
       COUNT (distinct b.order_id) as Number_of_Orders,  
       SUM(i.item_quantity) as Number_of_Items_Sold  
from booking b join item i on b.order_id = i.order_id  
where b.status = 'COMPLETED'  
group by b.date, b.brand
```

ASSIGNMENT 2

Write a SQL query to identify top 10 items of brand A, B, C in terms of value (not quantity), and their price, on a specific day (i.e. 21-Jun-2025)

-- Lấy top 10 item thuộc trong Brand A, B, C.

```
SELECT TOP 10
    MIN(b.brand) AS brand,
    i.item_id,
    i.item_name,
    i.item_price,
    SUM(i.item_price * i.item_quantity) AS total_value
FROM
    Booking b
INNER JOIN
    Item i ON b.order_id = i.order_id
WHERE
    b.status = 'COMPLETED'
    AND b.brand IN ('A', 'B', 'C')
GROUP BY
    i.item_id,
    i.item_name,
    i.item_price
ORDER BY
    total value DESC
```

ASSIGNMENT 2

Write a SQL query to identify top 10 items of brand A, B, C in terms of value (not quantity), and their price, on a specific day (i.e. 21-Jun-2025)

```
-- Lấy top 10 item theo từng loại brand A, B, C. Tức là Brand A lấy 10 item, Brand B lấy 10 item, Brand C lấy 10 Item
WITH RankedItems AS (
    SELECT
        b.brand,
        i.item_id,
        i.item_name,
        i.item_price,
        SUM(i.item_price * i.item_quantity) AS total_value,
        ROW_NUMBER() OVER (PARTITION BY b.brand ORDER BY SUM(i.item_price * i.item_quantity) DESC) AS rank_num
    FROM
        Booking b
    INNER JOIN
        Item i ON b.order_id = i.order_id
    WHERE
        b.status = 'COMPLETED' AND b.brand IN ('A', 'B', 'C')
    GROUP BY
        b.brand,
        i.item_id,
        i.item_name,
        i.item_price
)
SELECT
    brand,
    item_id,
    item_name,
    item_price,
    total_value
FROM
    RankedItems
WHERE
    rank_num <= 10
ORDER BY
    brand,
    total_value DESC;
```

THANK YOU
